● **Registration**

If you do not have an App account, you can choose to register an account or log in with a text message verification code. The registration process will be described on this page and the following page.

1. Click "Create new account" to display the registration page as shown in Figure 1.

2. The system will automatically detect the country/region you are in, or you can manually select the country/region, then enter your mobile phone number or email address and click "Next" as shown in Figure 2.

Figure 3

Figure 4

3.　　If you entered your mobile phone number, please enter the verification code you received via your mobile phone and a password on the page shown in Figure 3 and click "Confirm" to successfully complete the registration.

4.　　If you entered your email address, please enter your password on the page　shown in Figure 4 and click "Confirm" to successfully complete the registration.
Account and Password Login

　　If you already have an app account, click "Log in with existing account" to display the login page.

1.　　The system will automatically detect the country/region you are in, or you can manually select the country/region.

2.　　Enter your mobile phone number or email address and your password to log in to the system.

Login via a third-party social-media account

　　If you have Wechat or QQ installed on your mobile phone, click Wechat icon or QQ icon in the social-media account login area. After passing the authorization page, you will be logged in to the system.

Forgotten password

If you forget your app account password, you can reset your password through the password retrieval process.

1. Click "Forgot Password", as shown in Figure 1.

2. The system will automatically detect the country/region you are in, or you can manually select the country/region, then enter your mobile phone number or email address and click "Next", as shown in Figure 2.

3. Please enter the verification code you received via text message or email in the page shown in Figure 3.

4. Set the new Password,then click "Completed", as shown in Figure 4.

3. Family/Member Management
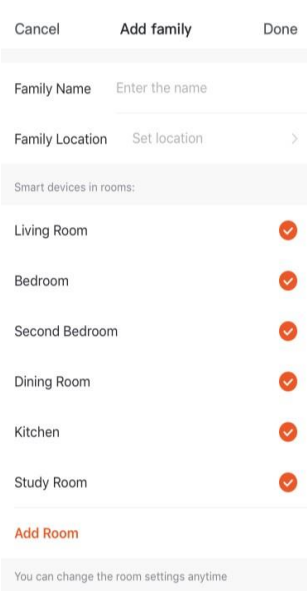

Figure 1

Figure 2
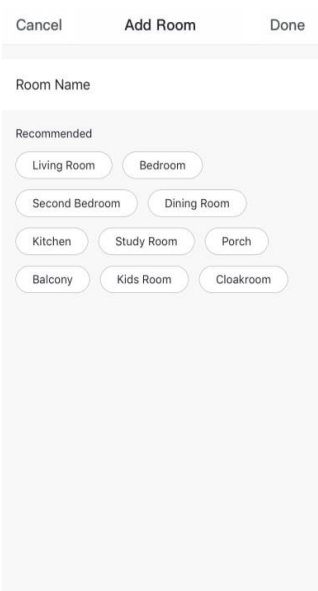

Figure 3
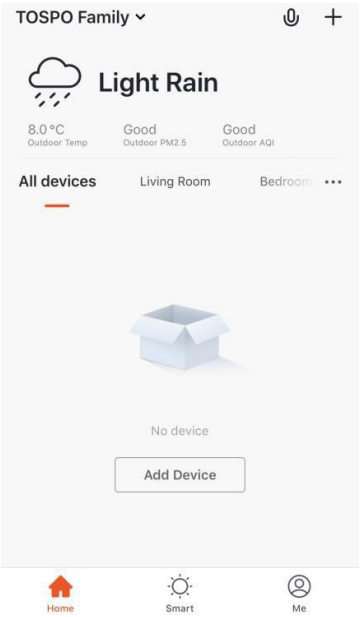

Figure 4

1. After logging in, click "Start Your Smart Life", and the "Add families" page will be displayed, as shown in Figure 1.

2.   Enter Home Name and click "Set Location" a map page will display. Move the family icon to your location to change it, then click "Confirm", as shown in Figure 2.

3.   Click "Add other rooms" to add rooms, as shown in Figure 3. Click "Completed" in the upper right corner to complete the room settings. You can also click the button on the "My family" page to change your room settings at any time, as shown in Figure 4.
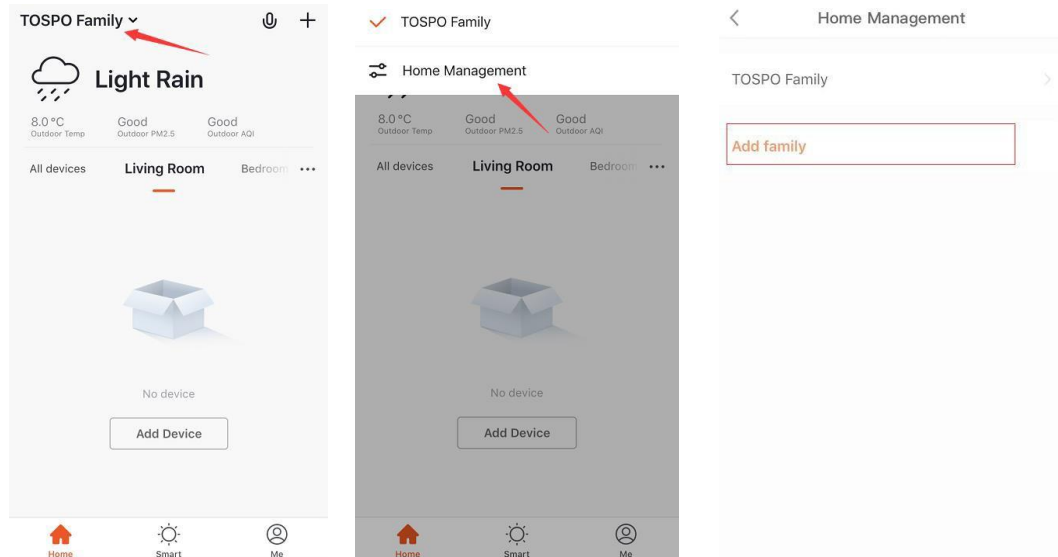

You can add and manage families by clicking the pull-down triangle in the upper left corner of the "My family" page.

The user can control devices for multiple families from one account. Simply select the family whose devices you wish to operate from the Select Family Menu.

Click "TOSPO Family" to display the Family Setting page, as shown below:

Add or delete a home's rooms, centralize management of devices in each room.

Other family members can control smart devices in the house but cannot change、 add or delete home settings. members.

The manager has the highest authorization, and can manage the authorizations for devices and family members.

4. Add Device
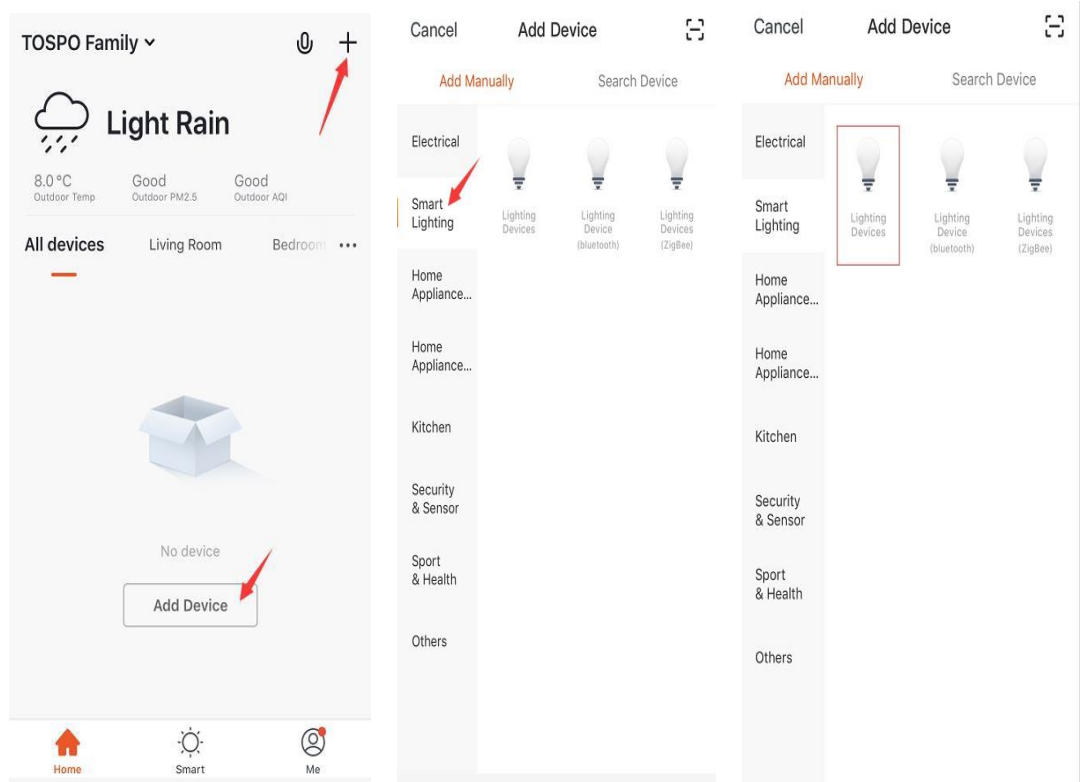

Click "Add Device" or "+" in the upper right corner of the "My family"page, then click"Smart Lighting" and select the "Lighting Devices" to be choosen.

● Add Device -- EZ Mode

Add Device

Power on the light and confirm that light blinks rapidly

Help

Confirm light blinks rapidly

1. The app provides two network configuration modes: EZ Mode and AP Mode. You can click "AP Mode" on the "EZ Mode" page to switch distribution methods.

2. If you configure the network in EZ Mode, please confirm that the light blinks rapidly, then click the confirm button to go to the next step.
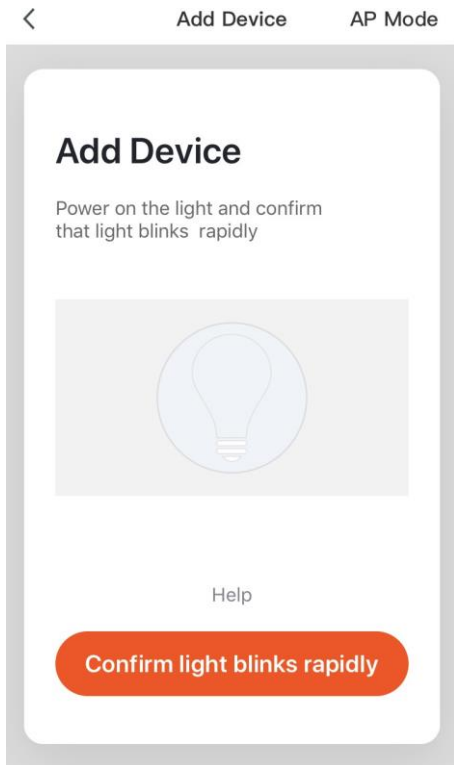

3. If the indicator is not blinking rapidly, click "Help" to see the procedure.

The light needs to be set to flash rapidly.Please follow the 3 steps below to finish setting.

Step 1 /3
Power on device.
Power off after 10s and then power on

Step 2 /3
Turn on-off-on-off-on
(Keep time interval not too short, turn off after light is on)

Step 3 /3
Confirm light bulb is now rapidly flashing

2 times per second
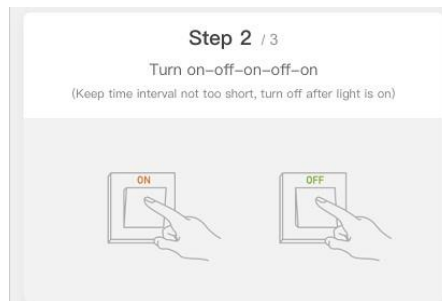

- **Add Device -- AP Mode**

Add Device

Power on the light and confirm
that light blinks slowly

Help

Confirm light slowly blink

1.   If you configure the network in AP Mode, please power onthe light and confirm that light blinks slowly then click the confirm button to go to the next step.

2.   If the device indicator is not blinking slowly, click "Help" to see the procedure.

The light needs to be set to flash slowly.Please follow the 4 steps below to finish setting.

Step 1 / 4
Power on device.
Power off after 10s and then power on

Step 2 / 4
Turn on–off–on–off–on
(Keep time interval not too short, turn off after light is on)

ON   OFF

Step 3 / 4
Confirm light bulb is now rapidly flashing
Then take the next step.

2 times
per second

Step 4 / 4
Operate again: Turn on–off–on–off–on
until light is slowly flashing

1 time
every 3s

🔒   Password

OK

1.   Under the specified network configuration mode, click the "Confirm" button once the indicator light is blinking quickly or slowly , and the page as shown in Figure 1 will be displayed.

2.   Select a Wifi with connectivity in the device's working area and enter the Wifi password, then click "Confirm" to begin the network configuration process.

- **Add Device -- Network Configuration Process**

If the EZ Mode is selected, the app will go through the network configuration process as shown in Figure 1, and the screen shown in Figure 2 will be displayed once the network configuration is successful. After the network configuration of the device is successful, the user can change the device name and select its location in your house.

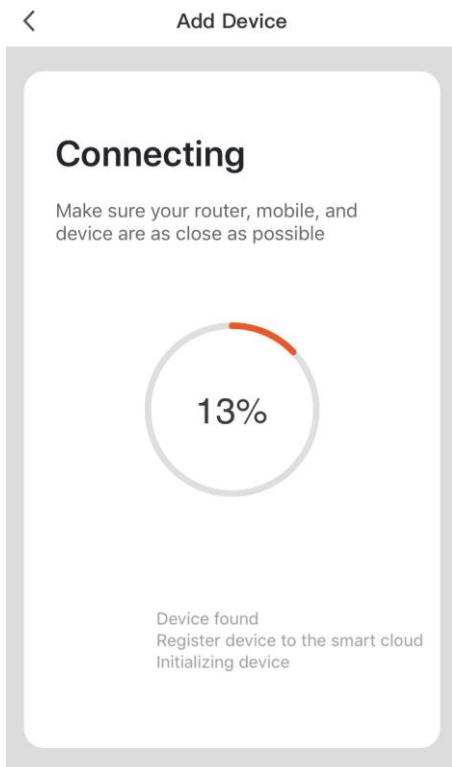

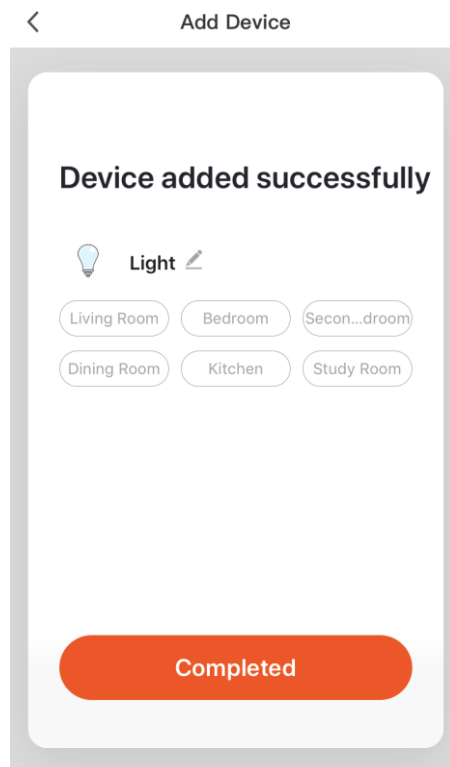

Figure 1

Figure 2
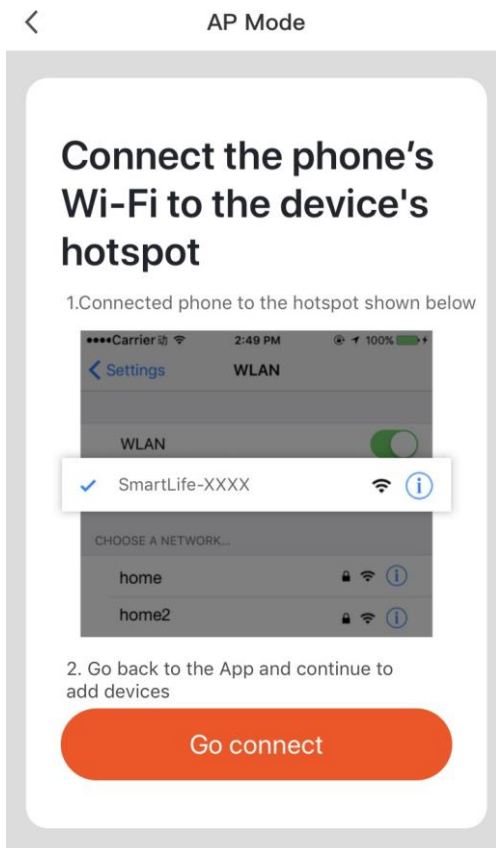

Figure 1

If the AP Mode (blink slowly) is adopted for network configuration, the user can also select the hotspot mode. Connect the device to the Wifi hotspot starting with "SmartLife", as shown in Figure 1.

Note: Some device hotspot names may not start with "SmartLife".

Once the device is connected to the specified hotspot, return to the network configuration screen to begin the network configuration process. The app will go through the network configuration process as shown in Figure 1.

The screen shown in Figure 2 will be displayed once the network configuration is successful.

Figure 1
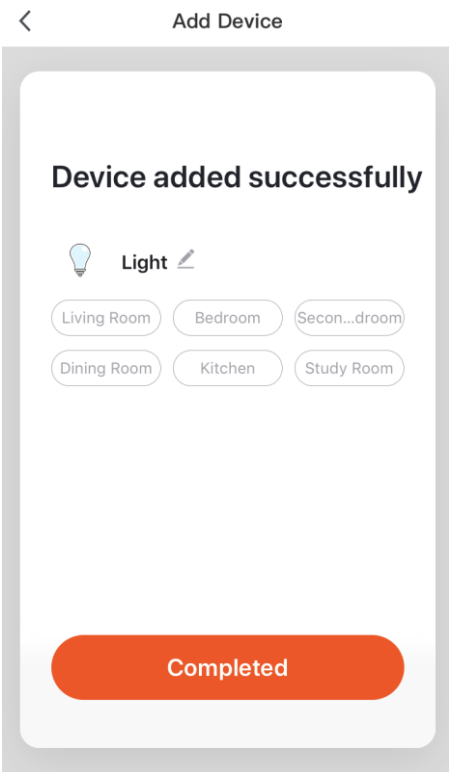

Figure 2

- **Add Device -- Addition failed**

If the network configuration fails, the page shown below will be displayed.

The user can click "Add again"or "View Help".

5. Device Control

● **Device Control -- Single Device Control**
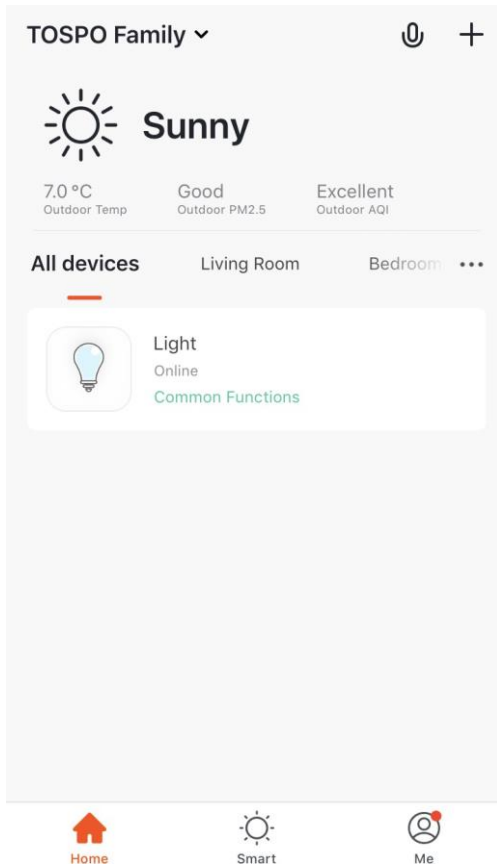

After network configuration, the names of the smart devices will be displayed on My family page. Click the device'name to display the control panel of smart device.

Remarks:
1.   When the device is online, the shortcut key operation is supported. The user can click "Frequently used functions" to use the   shortcut key operation.
2.   When the device is offline, "Offline" will be displayed, and it will not be operable.

On the device control panel, Figure 1 shows the example of a light in the switched-off state where the "Schedule" only can be set, and Figure 2 shows it in the switched-on state where "scene, color, brightness and schedule can be set. You can enable single device management by clicking the "..." in the upper right corner of the controls page.
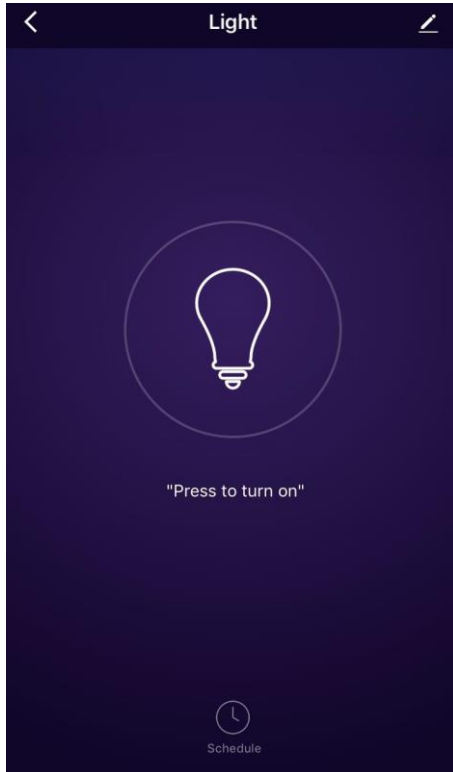

Figure 1
Figure 2

● **Dimmer**

On the dimmer tab , user can adjust the color temperature , color , and brightness of the light . Swipe left or right to switch between the white light picker and the colorful light picker. The light becomes the warmest in the center of the white light picker , and the color temperature gets cooler as it goes farther from the center.

Values from $0°$ to $360°$ of the colorful light picker represent different colors. A smaller radius indicates lower saturation. User can adjust the brightness by swiping left and right on the top. The top of the panel provides four recommended colors for quick settings.
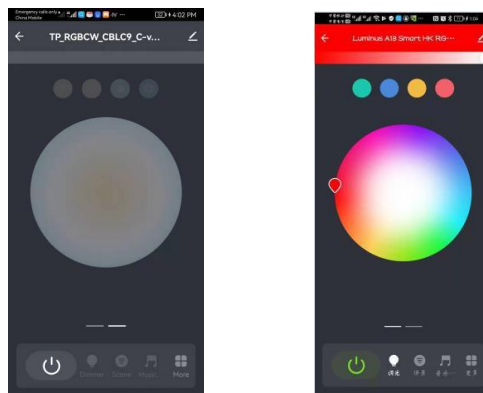

Note：The default color temperature is 2700K, and the maximum power consumption is

2700K；
