Website Updates Resources

Our Resources tab has been given an a face lift. It now features new tools to help you be more successful on your journey in LED solutions.

Education

Natural White Vs Daylight

Natural White Light energizes. It is often used in settings where a higher level of illumination is needed. With a color temperature of around 4000K, it produces a more neutral hue for increased visual acuity and eye comfort.

Daylight boosts productivity and focus and where you want to showcase colors and details. Excellent choice for several retail applications where product packaging and infographics would benefit from enhanced lighting.

EarthTronics has both color options available on several High Bay fixtures in both linear and UFO (round) designs.
